SPECIAL SEMINAR

WEDNESDAY 21 MAY 2008

Sustainable metropolitan planning: An integrated approach

Peter Rickwood
University of Technology, Sydney

Given the near universally accepted need to reduce energy use in our urban areas, a means of assessing the effect, on energy use, of metropolitan planning policies is useful.

Focusing on residential energy use, and using Sydney's "City of Cities" policy as an anchoring example, I will give a quick background on what we know, provide some broad details of the approach taken, and show some preliminary results. If there is enough time, I will talk in more detail about the residential choice model that is integral to the overall model.

1:00 pm start

Wednesday 21 May

Venue: Seminar Room
Graeme Caughley Building
